Hi all,

Tuesday is the day — the whole of Data Science and Data Engineering in the Hemel office, building the Owner Big Brain. Briefing attached; it's a ten-minute read and worth doing before you arrive.

I'm genuinely looking forward to this one. Most of us have never been in the same room, and quite a few of you have only ever met on a standup call. That's most of the value of the day right there.

What we're actually building.

Three domain agents — Owner LTV, Top of Funnel, Performance Marketing — sitting over a shared definition of what an owner is, all reachable from one prompt the business can type into. Plus a knowledge agent that remembers what it learns. The point is to answer a question nobody at Haven can answer today: *which acquisition routes produce the owners worth having?* Not the most leads — the owners who stay and are worth what we paid for them.

A few things worth noting:

- We're doing it all in Snowflake, and it already works. Peter has spent the last two days building the entire chain end to end — semantic views, agents, orchestration — and it runs. He'll walk everyone through exactly how at 09:25, so nobody starts from a blank page. Big thanks to Peter for that, and to Gary for getting the environment sorted.
- Please check you can get in, before Monday, Gary is setting up a dedicated role for the day. Run this in Snowflake, and if it fails, tell me or Gary.

```
```sql
USE ROLE NEXUS_SPIKE;
SELECT CURRENT_ROLE();
```
```

- Your teams and leads are in the briefing.** Rida, Matt, Dan C and Peter are leading — go to them first with anything. Every team has both engineers and scientists in it, which is deliberate.
- One bit of prep that really matters.** Have a look at a semantic view that already exists on our own data created by Giedrius — it's the best ten minutes of preparation available:

```
```sql
DESCRIBE SEMANTIC VIEW
NEXUS_PLATINUM.EPOS_SALES.SEM_EPOS_SALES;
```
```

Full detail in the attachment — agenda, the questions the business will ask, the specific gotchas for each team's data, and what to do before Tuesday.

See you Tuesday.

Many thanks,

Donovan
